### PACKING QUANTITIES

- This indicates how many products are packed per box and carton. All of our products are sold one size and one colour per carton.
- Unit of Sales (UOS)
   This is the minimum order quantity of a product. Unless indicated otherwise the UOS is normally one piece or one pair.
- 3. Where pack symbols are coloured orange the UOS is greater than 1.

Example 1 10 = Inner Box

200 = Total Outer Carton Quantity

Example 1 UOS=1 In this case the UOS = 1 piece

UOS=3000

Example 2 100 = Inner Box

500 = Mid Pack

3000 = Total Outer Carton Quantity

In this case the outer carton quantity is the UOS and is colour coded orange to show this. Ordering 1 unit = 3000 pieces when the order is placed.

Example 3 10 = Inner Box

x30 = Total Outer Carton Quantity (300)

Example 3
UOS=10
In this case the inner box is the UOS and is coloured orange to

Example 4 50 = Inner Box

x10 = The Number of Inner Boxes Per Mid Pack

Example 4 UOS=50 x6 = The Number of Mid Packs Per Carton

Inner Boxes Per Carton (10x6 = 60)

Number of Individual Pieces Per Carton (50x10x6 = 3000)

In this case the inner box is the UOS and is coloured orange to show this.

Examples of units of sale (UOS)

1 = Singles 1 = Singles = Garments, specialist gloves sold in

2 = Pair 2 = Pair = Footwear, most

B = Inner Box
B = Inner box =
Disposable gloves

C = Outer Carton C = Carton = Biztex, Disposables gloves,

Whether through new product launches or improved service, Portwest is always innovating. With contemporary designs in every range, customers can be assured that Portwest will offer them the latest trends and technologies.

Our award-winning design team have been busy researching the latest trends, cutting edge fabrics and smart components to deliver revolutionary new designs.

### **OUR DESIGN PROCESS**

### STRETCHING THE LIMITS

**Stretching the limits of comfort, safety and performance,** Portwest's innovative and premium stretch fabrics provide unparalleled ease of movement and supreme flexibility. The unique blend of materials offers both high performance and exceptional all-day comfort. Technically superior with high levels of breathability and excellent abrasion and tear resistance, **Portwest's range of stretch fabrics have it all.** 

### CUSTOM MADE TO ORDER

Portwest create customised products for thousands of customers throughout Australia and New Zealand each year.

The Technical Design Team work closely with customers to design individual products or full ranges. They work with independent notified bodies enabling certification to all international standards. Portwest has different service and customisation options to choose from.

### **MADE TO ORDER:**

YOUR IDEA
YOUR PRODUCT

Complete design service starting with your own specifications.

Custom Express is a fast, efficient service using stock fabrics and colours to guarantee industry leading production times.

Use our fully bespoke Custom Special service using customised fabrics and colours that are made to order.

### INDUSTRY LEADING PRODUCTION TIMES

Offering a fast and efficient personalised service.

### BRANDING SERVICES

Embroidery and screen printing can be applied to any workwear product to make your product stand out from the crowd. Using the latest Barudan embroidery machines, our in-house design team will produce the best quality branding for your work clothing.

### OVER 100 YEARS' EXPERIENCE IN EVERY STITCH

# TOP TIPS FOR STAYING SAFE WHEN WORKING IN THE SUN

Harmful effects of the sun can seriously compromise workers' health. Heat related fatigue and illness cost employers time and money, as well as having an illeffect on individuals' health.

### 90% of skin cancers can be prevented if exposure to harmful sun rays is controlled

Our creative team has developed innovative garments that offer up to 50+ UPF ratings and are designed to keep workers safe, cool and comfortable.

Know your UPF ratings because smart workwear selection can minimise the risk of heat related illness such as heat exhaustion.

### **UPF CLASSIFICATION SYSTEM**

RATED UPF	UPF CLASSIFICATION
15	MINIMUM PROTECTION
30	GOOD PROTECTION
50, 50+	EXCELLENT PROTECTION

## INNOVATIVE TECHNOLOGIES

### **FABRIC FINISHES**

Innovative fabric finishes used to enhance garment performance.

### SPLASH, OIL + STAIN

- ☑ Helps protect fabric from oil and grease
- ☑ Drives away dirt and grime
- ☑ Enhanced water resistance
- Aids the release of stubborn stains when washing
- ☑ Helps retain fabric softness

#### WATER RESISTANT

- ☑ Water beads away from the fabric surface
- Repels dirt and helps prevents stains
- Allows for garment breathability
- Enhanced stain removal

### **DRYING + WICKING**

- ☑ Wicks moisture away from the skin
- ✓ Keeps fabric fresh and comfortable
- Retains fabric brightness
- ☑ Powerful protection from stains
- Enhanced garment breathability
- ☑ Blocks bad odours

### **RETRO-REFLECTIVE TAPE**

Innovative retro-reflective tape for ultimate visibility in low light conditions.

### **HiVisTex**

HiVisTex is the latest innovation in reflective tape material that surpasses all international standards including AS/NZS 1906.4, EN ISO 20471 and ANSI/ISEA 107.

HiVisTex tape is constructed from thousands of premium, wide angle, glass beads, placed per centimetre squared. These beads work like thousands of tiny mirrors, reflecting light back towards its source as a brilliant white glow. Perfect for use in the protective clothing industries HiVisTex tape ensures the wearer ultimate visibility in low light conditions.

## **HARD WEARING EASY CARE FABRIC**

# PRIME MOVER®

With over 30 styles to choose from, Prime Mover offers you the most hardworking shirt range in the market. All Prime Mover safety and non-safety shirts are designed to offer a stylish and comfortable fit, alongside maximum protection and increased performance.

100% Cotton Drill fabric is available in two weights 260g and 300g. This fabric is fully pre shrunk and has excellent dye retention properties. The long staple fibres used in the construction process provide strength, pilling resistance and a quality finish. This fabric has a UPF rating of 50+ so will block 98% of the UV rays which fall on the garment.

Kingsmill<sup>TM</sup> Cotton Stretch is a premium cotton stretch fabric. This twill weave blend of 98% cotton and 2% elastane provides the ultimate in comfort and flexibility. The high cotton content gives an ultra soft handle, and the added elastane delivers ease of movement. This fabric has a UPF rating of 50+ to block 98% of UV rays.

## **SMART LOOK -EASY WEARING SHIRTS**

**PORTWEST**'s extensive range of high visibility clothing is designed and constructed to ensure compliance with relevant safety standards. Innovative and technical, this high visibility range is ideal for those who will not compromise on style, comfort or performance.

OXFORD WEAVE 100% polyester yarn, is a tough fabric for tough conditions. The fabric has superb abrasion and tear resistance. The polyurethane (PU) coating on the inside makes the fabric durable and waterproof and the outer has a water and stain repellent coating which helps keep the garment clean.

Made with 190T plain weave 100% polyester yarn this is a durable, hard wearing fabric for tough conditions. This fabric is lightweight and has superb abrasion and tear resistance. It has a PVC coating inside which makes the fabric waterproof and has a water and stain repellent coating on the outside which helps keep the garment clean.

This premium cotton fabric is constructed using special long staple fibres which create a soft but strong material. Moisture is absorbed quickly which allows the wearer to feel cooler, drier and more comfortable.

The Micro Mesh bird eye high visibility fabric is constructed to keep wearers cool, comfortable and visible in even the warmest environments. Providing the wearer with a range of UPF protection, the fabric has advanced cooling properties which combined with its breathability make it the ideal choice for warmer climates. Durable, wrinkle resistant with a quick dry quality finish, this fabric will stay strong wash after wash.

Cotton Comfort is constructed from a blend of 53% cotton/47% polyester. With the cotton on the inside for comfort and the polyester on the outside for maximum durability, this is a robust fabric that provides ultimate comfort. Certified to AS/NZS 1906.4.

Vestport<sup>™</sup> fabric is constructed from 100% polyester warp knitted fabric. This fabric is lightweight, comfortable and highly breathable. Certified to EN ISO 20471 and AS/NZS 1906.4

#### High Visibility Workwear Meets Relevant Australian and New Zealand Standards, AS 4602.1 for High Visibility Safety Garments

The AS 4602.1 Standard specifies the visual requirements for high visibility safety garments for occupational wear by people who may be exposed to the hazard of moving traffic, moving plant or equipment in high risk situations. The standard covers garments suitable for daytime wear, night-time wear where they will be seen by retroreflected light or for wear under both conditions but excludes garments for use by fire services.

#### The garments specified in this Standard are classified as follows:

A garment designed for daytime use.

A garment designed for night use using retro reflected light. Class N

Class D/N A garment designed for day and night use.

#### Australian/New Zealand Standard AS/NZS 1906.4 Retroreflective Materials and Devices for Road Traffic Control **Purposes**

This Standard specifies the requirements for high visibility materials and reflective tape to be used on industrial safety garments for outdoor daytime use and for use at night or in other dark conditions where the wearer needs to be highly visible.

High-visibility materials are classified according to their day or night-time application, as follows:

Class F: High daytime visibility fluorescent material. Class F (W) - includes Wet Weather testing.

Class R: Retroreflective material for use on garments used in dark conditions.

Class RF: Combined performance retroreflective/fluorescent material meeting all of the requirements of Class R - and the daytime colour of Class F.

Class NF: High daytime visibility non-fluorescent material.

#### Temporary Traffic Management Control (TTMC-W)

The New Zealand Transport Agency (NZTA) has a Code of Practice which specifies the standard of safety garment that a worker must wear while working in or close to hazardous traffic areas.

#### Victoria Roads: VicRoads Style

This catalogue has a range of garments suitable for working on Victoria Roads marked Vic Roads Style.

#### Queensland Traffic Controller - Transport and Main Roads: QLD

TMR Style - This catalogue has a range of garments suitable for Queensland Traffic Management marked QLD TMR Style.

#### The AS 7471 Australian Rail Standard

This Standard outlines the minimum requirements for personal protection equipment including High visibility outer clothing when undertaking work in the rail corridor. The Standard aims to establish standardisation of PPE within the Australian rail industry.

New South Wales Rail Standard: NSW Rail Compliant - Styles with this marking are compliant to the New South Wales Rail standard

#### **AS/NZS 1957**

Outlines the care instructions required to ensure correct care of the garment.

#### AS 4399 Sun Protection Clothing Classification

UPF (Ultraviolet Protection Factor) is the classification system used for sun protective clothing. All fabrics are independently tested according to the AS 4399 standard.

The UPF rating applies only to the area of skin covered. Protection may be reduced if the material is wet, stretched or from the effects of normal wear or exposure to chemicals.

For best sun protection use hats, clothing that provides maximum skin coverage, sunglasses, sunscreen and shade.

Sun protective clothing is categorized according to its rated UPF as given in table below.

Rated UPF	UPF classification
15	Minimum Protection
30	<b>Good Protection</b>
50, 50+	Excellent Protection

### FUROPFAN **STANDARDS**

#### EN ISO 20471 - High Visibility Clothing - Test Methods And Requirements

This International Standard specifies requirements for high visibility clothing, which is capable of visually signalling the user's presence. The high visibility clothing is intended to provide conspicuity of the wearer in any light condition when viewed by the operators of vehicles or other mechanised equipment during daylight conditions and under illumination of headlights in the dark.

High Visibility clothing has a fluorescent surface, combined with reflective material that meets certification requirements in 3 different classes:

#### Class 3: Highest Level

Highest level of protection - required for any persons working on or near motorways or dual-carriage ways or airports. Must incorporate a minimum of 0.80m2 of background material and 0.20m2 of retro-reflective materials. (4 metres of 5cm wide reflective tape)

#### Class 2: Intermediate Level

Required for any persons working on or near A and B class roads, also for delivery drivers. Must incorporate a minimum of 0.50m2 of background material and 0.13m2 of retro-reflective material. (2.60 metres of 5cm wide reflective tape)

#### Class 1: Minimum Level

Minimum level of protection required for any persons working on a private road or to be used in conjunction with a higher classed garment. Must incorporate a minimum of 0.14m2 of background material and 0.10m2 of retro-reflective material. (2 metres of 5cm wide reflective tane)

## EN 343 - Protective Clothing, Protection Against

EN 343 EN 343 is the harmonised European standard that applies to garments worn in adverse weather conditions. It specifies the characteristics of protective clothing against the influence of foul weather, wind and cool above -5°c. The standard provides for two performance parameters: X = Waterproofness (4 levels) Y = Breathable properties (4 levels)

#### EN 342 - Protective Clothing - Ensembles and **Garments for Protection Against Cold**

EN 342 is the harmonised European standard that specifies requirements and test methods for performance of clothing ensembles (ie. two piece suits or coveralls) and of single garments for protection against cold environment.

#### EN 14058 - Protective Clothing- Garments for **Protection against Cool Environments**

This standard specifies requirements and test methods for the performance of single garments for protection against cooling of the body in cool environments. Cool environments are as a result of a combination of humidity and wind at temperatures of -5°C and above.

At moderate low temperatures garments against local body cooling are not only used for outdoor activities but can be used for indoor activities. In these cases garments often do not need to be made of watertight or air impermeable materials. Therefore, these requirements are optional for this standard.

# The cornerstone of success is stringent quality control. Can you be sure the product you are wearing conforms to AS/NZS 4602.1?

A certificate from a test house guarantees that the garment or fabric sent to the test house has attained the AS/NZS 4602.1 standard. It is not a guarantee that the bulk production meets the standard. Therefore, it is necessary that every roll of fabric and retro-reflective tape is tested with highly specialised equipment which guarantees that all production meets the AS/NZS 1906.4 standard.

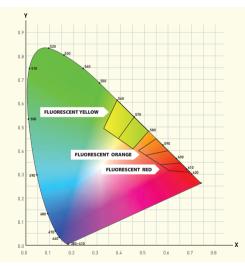

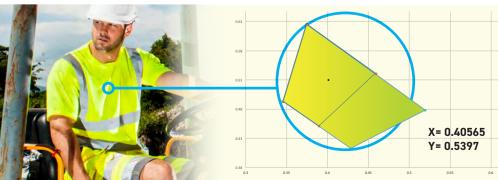

### **FABRIC TESTING**

In the quality control laboratory the Minolta Spectrophotometer is used to check every roll of fabric. This guarantees that the fabric used is fully compliant to the AS/NZS 1906.4 standard.

This graph displays the CIE 1931 X, Y chromaticity diagram which defines a colour space for graphing colour. Specifications for the colour space and luminance (brightness) are provided in the AS/NZS 1906.4 standard. The colour space is divided into 2 main classes - yellow and orange-red, with further divisions for certain application

## CLOSE-UP VIEW OF FLUORESCENT YELLOW

This graph shows an enlarged view of the yellow AS/NZ 1906.4 colour range. The colour co-ordinates marked on the graph are a reading from our fluorescent yellow fabric. This reading is taken using the Minolta Spectrophotometer.

Portwest PW3™ contemporary workwear blends sports, lifestyle trends and function with a modern fit and improved comfort. Utilising premium fabrics, products are engineered for flexibility across a diverse range of industry and trade end uses and offer exceptional value.

# X-BACK RANGE

# CROSS BACK REFLECTIVE TAPE FOR MAXIMUM VISIBILITY

Meeting the stringent requirements in both design and construction, this collection of styles is fully compliant with the latest NSW Rail standard. The NSW Rail standard sets out the minimum specification for high visibility clothing worn in the Rail Industry. These styles are also certified to the AS 4602.1 standard which specifies the visual requirements for high visibility safety garments.

# TTMC-W17 RANGE

The New Zealand Transport Agency (NZTA) has a code of practice which specifies the standard of safety garment that a worker must wear while working in or close to hazardous traffic areas. This safety standard is called TTMC-W17.

The main standard guidelines are as follows:

- All garments align to AS 4602.1:2011 Amendment No. 2.
- The area of high visibility background material for each design meets the requirements of AS 4602.1:2011 High Visibility Safety Standard.
- Compliant styles have a specific belt and braces configuration of 50mm retroreflective tape.
- The vertical measurement for the position of the waist hoop is taken from the highest shoulder point and is positioned at 53cm +/- 2.
- The overall front length of vests and shirts does not exceed 71cm and the back hem drop extends another 15cm +/- 0.5.
- Any buttons, studs or similar closure devices that are placed on compliant material must be concealed or match the colour of the garment.
- There are no breaks permitted on the waist hoop except for a 25 mm front opening break.
- All garments display permanent labels that state TTMC-W17 standard.

This industry leading flame resistant range provides multi standard protection for hazardous environments. These state of the art products are the result of years of experience combined with advanced technology and market research. Commitment to the health, safety and comfort of the wearer can be seen in the wide range of products suitable for all climates and end uses.

This inherently flame resistant fabric offers luxurious comfort and is ideal for hot climates. The special viscose blend provides outstanding ARC protection rarely achieved on lightweight fabrics. Constructed using 65% viscose, 33% aramid, 2 % anti-static, **Portflame™** is available in 185g.

**Bizflame®** is a proprietary flame resistant finish which, when applied to fabric, gives excellent flame resistance. All of the Bizflame fabrics use the highest quality raw materials, ensuring the perfect balance of comfort and strength.

**Bizweld®:** 100% cotton fabric is completely flame resistant. All Bizweld garments offer excellent flame and molten splash protection for welding, foundries and allied industries.

Modacrylic fibres provide inherent flame resistance, excellent dimensional stability and high elastic properties which allow garments to retain their shape. High cotton content gives the fabric comfort, warmth and a soft handle. Carbon fibre woven into the fabric gives inherent anti static properties.

**PrimeTech™** FR Fabric: is exclusive to Prime Mover offering powerful flame resistant protection in 100% cotton fabrics. PrimeTech FR clothing will keep the wearer cool and comfortable whilst offering outstanding protection against flame spread.

#### FLAME RESISTANT - EN STANDARDS

### 📜 FUROPFAN FN STANDARDS

IEC 61482-2:2009

IEC 61482-2 ATPV or E<sub>BTS0</sub> = xxx cal/cm<sup>2</sup> Class 1 or Class 2

IEC 61482-2 ATPV or E<sub>BT50</sub> = xxx cal/cm<sup>2</sup> and Class 1 or Class 2

This standard specifies requirements and test methods applicable to materials and garments for protective clothing against the thermal effects of an electric arc event. An electric arc is a continuous electric discharge of high current between conductors generating very bright light and intensive heat. Two international test methods have been developed to provide information on the resistance of clothing to the thermal effects of electric arcs. Each method gives different information. To comply with the standard either or both tests must be carried out.

#### Box Test Method IEC 61482-1-2

The fabric/garment is exposed to an electric arc confined in a specific box with a specific electrode arrangement for 0.5 seconds. Class 1 is to a current of 4kA arc, Class 2 is to a current of 7 kA arc. Test conditions for Class 1 & 2 try to stimulate typical exposure conditions for a short circuit current of 4kA and 7kA respectively.

or

#### Open Arc Method IEC 61482-1-1.

This test method aims to establish the ATPV (Arc Thermal Performance Value) or Ebt (Energy Breakopen Threshold) of a fabric. The ATPV is the amount of energy required to cause a 2nd degree burn through the material prior to break-open (50% probability). The Ebt is the amount of energy where the material breaks-open (50% probability). This is normally the upper thermal limit of the fabric where the fibres are damaged and the material loses mechanical strength. Both ATPV and Ebt are expressed in calories per cm2 EN 61482-1-1 tests the fabric with an 8kA arc for various incident durations. Workers are assumed to be safe if the arc rating of

their clothes exceeds the electric arc incident energy calculated in the worst case scenario of a risk assessment. Garments can be layered to achieve an overall ATPV or Ebt Rating. For example a thermal layer may achieve an Ebt of 4.3 Cal/m2, and an outer coverall may achieve an ATPV of 13.6Cal/cm2. However the combination ATPV/Ebt ratings will be greater than the sum of the two single lavers. as the air gap between the two layers affords the wearer additional protection. Another parameter measured during the open arc test is the HAF value (Heat Attenuation Factor) this describes the amount of heat blocked by the fahric

#### ASTM F1959/F1959M-14

FABRIC ONLY TEST. This test method is the same as outlined above under EN 61482-1-1. Pre treatment may vary.

#### ASTM® F1959/F1959M-12: 2013

Standard Test Method for Determining the ARC Rating of Materials for Clothing FARRIC ONLY TEST. This test method is the same as outlined under EN 61482-1-1. Pre treatment may vary.

\* Note the term HRC has been replaced by

#### EN ISO 11612: 2015

performance requirements out in this international standard are applicable to garments, which could be worn for a wide range of end uses, where there is a need for clothing with limited flame spread properties and where the user can be exposed to radiant, convective or contact heat or molten metal splashes.

This test uses standard methods and conditions to predict the performance of fabric/garments in the event of contact with heat or flames. Garment features such as seams, closures and logos must be tested as well as the fabric. Tests must be carried out on pre-treated components according to the manufacturers care label.

Specific testing is listed below: Dimensional change Limited flame spread (A1+A2)\* Convective heat (B) - 3 levels Radiant heat (C) - 4 levels

Molten aluminium splash (D) - 3 levels Molten iron splash (E) - 3 levels Contact heat (F) - 3 levels (temperature 250 dearees Celsius)

Heat resistance at a temperature of 180 degrees Celsius. Tensile strength (must meet a minimum of

Tear strength (must meet a minimum of 10N) Bursting strength

Garment design requires that coverage must be provided from the neck to the wrists and to the ankles.

Optional testing includes water vapour resistance and manikin testing for overall burn prediction.

\*This test must be carried out on fabric and

#### EN ISO 11611: 2015

This international standard specifies minimum basic safety requirements and test methods for protective clothing for use in welding and allied processes (excluding hand protection). The international standard specifies two classes with specific performance requirements.

Class 1 is protection against less hazardous welding techniques and situations causing

lower levels of spatter and radiant heat.

Class 2 is protection against more hazardous welding techniques and situations causing higher levels of spatter and radiant heat.

The following is a summary of the testing required: Tensile strength (must meet a minimum of

ANN N) Tear strength (must meet a minimum of 15N

for class 1 and 20N for class 2) Bursting strength

Seam strength Dimensional change

Seam strength

Requirements of leather Limited flame spread (A1+A2)\* Molten droplets Heat transfer (radiation) Electrical resistance

\*This test must be carried out on fabric and seams.

#### EN ISO 14116 EN ISO 14116: 2015

This standard specifies the performance requirements for the limited flame spread properties of materials, material assemblies and protective clothing in order to reduce the possibility of the clothing burning and thereby itself constituting a hazard. Additional requirements for clothing are also specified.

Protective clothing complying with this standard is intended to protect workers against occasional and brief contact with

small igniting flames in circumstances where there is no significant flame hazard and without the presence of another type of heat.

EN ISO 14116 has three different categories for flame spread, Index 1, 2 and 3 as detailed in the table below:

Index 1 garments should not be worn next to the skin. They must be worn over Index 2 or 3 garments.

Index 2 or 3 garments can be worn next to

Testing must be carried out on pre-treated components according to the manufacturers care label.

Testing required is as follows: Limited flame spread Tensile strength Tear strength Seam strength

INDEX	REQUIREMENTS
	No flame spread
1	No flaming debris
	No afterglow shall spread
	No flame spread
	No flaming debris
2	No afterglow shall spread
	No hole shall form
	No flame spread
	No flaming debris
3	No afterglow shall spread
"	No hole shall form
	The afterflame must last no longer than 2 seconds

EN 1149: 2018

Protective Clothing - Electrostatic Properties - Part 5. Material Performance and Design Requirements.

This is the harmonized European standard for protective clothing- protection against the danger caused by static electricity. This standard is not applicable for protection against mains voltages.

EN1149-1 Test method for surface conducting fahrics EN1149-3 Charge decay test method for all

EN1149-5 Performance requirements

#### **ATEX Directive**

The ATEX Directive defines what equipment is permitted in an environment where an explosive atmosphere may exist. Portwest recommends using garments certified to EN 1149 for added protection in an ATEX environment. Portwest garments have not been assessed under the ATEX directive which currently excludes PPE.

#### EN 13034: 2009

Performance requirements for chemical protective clothing offering limited protective performance against liquid chemicals (Type 6 and Type PB [6] equipment). This standard specifies the minimum requirements for limited use and re-usable limited performance chemical protective clothing. Limited performance chemical protective clothing is intended for use in cases of a potential exposure to a light spray, liquid aerosols or low pressure, low volume splashes, against which a complete liquid permeation barrier (at a molecular level) is not required.

The standard covers both chemical protective suits (Type 6) and partial body protection (Type PB[6]).

Type 6 suits are tested using a mist or fine spray of water with a dye added to aid the assessment of leakage. The test subject wears an absorbent suit underneath the one to be tested, which absorbs any leaks and is stained by the dye. Success or failure is determined by measuring the total area of any stains on three suits and comparing this with the requirement. A range of other tests is specified, including resistance to

abrasion, tear strength, tensile strength, resistance to puncture, resistance to ignition, resistance to penetration by liquid chemicals and seam strength. In the test for liquid chemical repellency and resistance to penetration by liquid chemicals, a bank of four test chemicals is given in the standard although the requirement is that the suit material demonstrates adequate repellency and resistance to penetration against just one chemical from this list

EN 343: 2003

EN 343 is the harmonised European standard that applies to garments worn in adverse weather conditions. It specifies the characteristics of protective clothing against the influence of foul weather, wind and cool above -5°c. The standard provides for two performance parameters:

X = Waterproofness (4 levels)

Y = Breathable properties (4 levels)

### AMERICAN STANDARDS

#### NFPA® 2112: 2018

This standard specifies the minimum performance requirements and test methods for flame resistant fabric and components and the design and certification requirements for garments for use in areas at risk from flash fires. Flame resistant fabrics must pass a comprehensive list of thermal tests, including the following:

·ASTM F2700 - Heat Transfer Performance

#### (HTP) Test

This test is a measure of the unsteady state heat transfer properties of garment materials.

•ASTM D6413 – Vertical Flammability (Flame Resistance) Test

This test is used to determine how easily fabrics ignite and continue to burn once ignited.

•Thermal Shrinkage Resistance Test This test measures a fabrics resistance to shrinkage when exposed to heat.

·Heat Resistance Test
This test measures how fabrics and
components react to the high heat that could
occur during a flash fire.

-ASTM F1930-11 – Thermal Manikin Test This test provides an overall evaluation of how the fabric performs in a standardized coverall design after three-second thermal exposure.

•FTMS 191A – Thread melting resistance Thread used in flame resistant garments must withstand temperatures of up to 500°F.

#### NFPA® 70E: 2015

This standard addresses electrical safetyrelated work practices for employee workplaces and requires employees working on or near energized parts and equipment to wear flame resistant clothing that meets the requirements of ASTM F1506

The NFPA 70E standard provides table 130.7(C)(16) as a guideline for the selection of protective apparel. This table lists the requirements for PPE based on arc flash PPE categories 1 through 4. This clothing and equipment shall be used when working within the arc flash boundary.

The table ranges from ARC 1 (which is low risk) up to ARC 4 (which is high risk and requires FR clothing with a minimum arc rating of 40). The higher the ARC rating value, the greater the protection.

ASTM F1959/F1959M-12 is the test method for determining the ARC rating of materials for clothing. This method is the same as outlined under IEC 61482-1-1, pre-treatment may vary.

	Hazard / Risk Category	Clothing description	Required minimum Arc rating of PPE/ cal/cm2
	ARC	1 ARC: Arc rated FR Shirt and FR pants or FR Coverall 4	4
	ARC ARC	2 ARC: Arc rated FR Shirt and FR pants or FR Coverall 8	8
	ARC	3 ARC: Arc rated FR Shirt and FR pants or FR Coverall, and arc flash suit selected so that the system arc rating meets the required minimum 25	25
	ARC	4 ARC: Arc rated FR Shirt and FR pants or FR Coverall and arc flash suit selected so that the system arc rating meets the required minimum 40	40

## LAUNDERING OF FR FABRICS

The flame resistant finish is retained for the normal life cycle of the garment provided that the care instructions are adhered to.

#### Washing / Drying Procedure:

Pretreatment: If stains are difficult to remove, they can be treated before putting into the washing machine with a liquid detergent applied directly to stains and lightly rubbed. Heavier and stubborn stains should be pretreated with a commercial stain removal product at the earliest opportunity and sufficient time allowed for the pretreatment to penetrate and loosen the stain. Never use chlorine bleach or washing detergents containing bleach as these will reduce the flame resistance properties of the fabric. Fabric softeners, starches and other laundry additives are not recommended as they can mask the flame resistance performance and may also act as a fuel in case of combustion.

#### Washing

Always wash contaminated workwear separately, do not mix with non workwear. Flame Resistant fabric can usually be washed at high temperatures however it is the components (ie. the reflective tape, badging, etc.) on a finished garment that dictates the maximum washing temperature that the garment can be washed at. Always follow the washing temperature on the garment label. Always wash and dry garments inside out to minimize surface abrasion and help maintain the surface appearance of the fabric. Zips should be closed during washing.

#### Load Size

To ensure a more efficient, cleaner wash, avoid overloading the machine so the garments can move freely through the wash and rinse cycles.

#### Drying:

Tumble drying is not usually recommended as the temperature used is often too high and can cause garment shrinkage. It is vital that cotton or cotton mix garments are not over dried. Over drying is the main cause of excessive garment shrinkage. Do not hang in direct sunlight. This can cause fading.

## LIGHTWEIGHT **FLAME RESISTANT PROTECTION**

Constructed from 99% cotton and interwoven with 1% carbon fibres, this fabric has flame resistant and anti-static properties. Comfort and durability are key features of this fabric.

#### FLAME RESISTANT SUPER LIGHT WEIGHT **ANTI-STATIC COVERALL 210G**

- · Fabric conforms to ARC2 = 9.1cal/cm<sup>2</sup>
- · Protection against radiant, convective and contact heat
- · Sew on flame resistant industrial wash tape
- · Two tier knee pad pockets allowing two positioning options
- · Two-way zip for quick and easy access
- · Touch tape cuffs for a secure fit

**PORTWEST** rainwear is engineered with exceptional fabrics and designs, allowing these garments to transition between work and leisure. The best quality materials and high technology construction techniques are used throughout, guaranteeing the ultimate in all-weather protection. Tested to withstand the rigours of everyday wear, each garment has been designed and manufactured with care to ensure total satisfaction wear after wear.

Engineered with exceptional fabric and designs, the new **Portwest X3<sup>TM</sup>** rainwear collection allows for optimal outdoor performance. Designed with a modern slim cut, each style offers multiple performance enhancing features. The highly waterproof and breathable fabrics used in this collection offer maximum protection against harsh weather conditions.

The **PORTWEST PWR™** collection is constructed from Portwest Extreme, a premium high performance waterproof and breathable fabric. Using state-of-the-art technology, the base fabric has been engineered to provide a technical barrier against the elements. This provides the maximum waterproof, breathable and windproof protection, which far exceed the current highest requirements.

Technical and innovative, the **TK2<sup>TM</sup>** rainwear collection is engineered for maximum waterproof, windproof and breathable performance. Designed to be worn in adverse weather conditions, the collection incorporates clever styling with shaped panels for a comfortable and generous fit. Additionally this sophisticated collection is ideal for overbranding.

**Texpel™ Splash** is an extremely water resistant fabric finish which ensures water beads up and rolls off the fabric surface. This premium finish also repels dirt and helps prevent stains to keep your garment looking cleaner for longer.

**Texpel™ Micro** is a unique technology which inhibits the spread and growth of harmful microbes such as bacteria, fungi, spores and viruses. This permanent treatment has been independently tested and proven to provide 99.9% of antimicrobial properties even after 50 washes.

Constructed using innovative carbon fibre technology, this heated jacket features three panels on critical points of the body. Each jacket includes a 10,000MA USB rechargeable battery that powers the heat technology (3-4 hours charging required). The built in controls allow the wearer to switch between three settings of heat: high, medium, low. The heated panels will give temperatures between 25-45C and can last up to 10 hours, depending on setting.

The **PORTWEST** Workwear Collection offers a range of designs and features suitable for many end uses. The best quality fabrics and construction techniques are used, guaranteeing comfort and safety. Tested to withstand the rigours of everyday wear, each garment has been carefully designed and manufactured to ensure optimum quality at the best price.

**Kingsmill™ Cotton Stretch** is a premium cotton stretch fabric. This twill weave blend of 98% cotton and 2% elastane provides the ultimate in comfort and flexibility. The high cotton content gives an ultra soft handle, and the added elastane delivers ease of movement. This fabric has a UPF rating of 50+ to block 98% of UV rays.

Portwest cutting edge **Kingsmill™ Polyester Stretch** is a four-way stretch fabric made from 93% polyester, 7% elastane 270g. This blend provides ease of movement and effortless comfort in active use. The fabric delivers technical superiority with high breathability, moisture wicking and fast drying properties.

Portwest's innovative two-way **Kingsmill<sup>TM</sup> Polycotton Stretch** fabric is constructed from 65% polyester, 35% cotton. This premium workwear fabric offers excellent abrasion and tear resistant properties whilst the mechanical stretch function ensures full ease of movement for the wearer. A UPF rating of 50+ on this fabric blocks 98% of the UV rays.

Constructed from 65% Polyester, 35% Cotton, **Kingsmill<sup>TM</sup>** fabric guarantees high performance and maximum comfort. The yarns are all ring spun with long staple combed cotton providing a smooth handle and excellent pilling resistance. The material is fully pre-shrunk and has superior dye retention. A UPF rating of 50+ will block 98% of UV rays.

# QUALITY FABRICS ENGINEERED FOR ENDURANCE

# ACTIVE **STREET** WORKWEAR

Portwest KX3™ is a superior line of trend-led apparel combining quality construction to the highest standards and technical fabrics. Key characteristics within this collection include abrasion resistance, moisture management and stretch fabrics for sustained agility and effortless movement. All KX3 garments have been designed to fully complement each other to allow a personal layering system to be built. A perfect solution for modern workwear.

A PREMIUM RANGE FOR THE MODERN WORKER

# PORTWEST® COOLING 360°

### The Latest in Cooling Technology

This innovative range offers a comprehensive selection of products to help minimise the risk of heat stress and UV rays. Outdoor workers in construction, agriculture, mining, oil and gas and other industries frequently find themselves working in temperatures up to and over 40°C/100°F. This Cooling range is ideal for use in these conditions.

#### **FABRIC INFORMATION**

Portwest evaporative cooling products are constructed from Cooling  $360^{\circ}$  Fabric Technology which uses a unique polymer chemistry. Simply activate by soaking in water creating a chemical reaction within the fabric which enables the garments to act like a sponge; retaining water, keeping the body cool in hot weather conditions.

Step 2
SQUEEZE

Kingsmill: 65% Polyester, 35% Cotton, 190g

This exclusive range of Chefswear has been designed especially for busy catering professionals. Using high quality, hardwearing fabrics and advanced construction techniques, each style has been tested to withstand the rigours of everyday wear and tear. Practical and stylish with an array of designs from classic to modern, this range has been designed to keep the wearer cool and comfortable in hot working environments.

**Kingsmill™** Cotton is fully pre shrunk and has excellent dye retention properties. The long staple fibres used in the construction process provide strength, pilling resistance and a quality finish.

Constructed from 65% Polyester, 35% Cotton, **Kingsmill™** fabric guarantees high performance and maximum comfort. The material is fully pre-shrunk, has superior dye retention and all the features you would expect from a modern workwear fabric.

**MeshAir<sup>TM</sup> Pro** is a double layer 100% polyester aerated mesh designed to improve airflow and draw moisture away from the skin, leaving the wearer cool, dry and comfortable. The MeshAir Pro 140g fabric features special hollow fibres that enhance air circulation to help regulate body temperature, while the double layer construction offers improved breathability and protection.

Our exclusive range of lightweight 100% cotton chefs jackets feature **MeshAir™** aerated underarm mesh panels. Constructed from 100% polyester, MeshAir aerated mesh 110g helps improve airflow and wicks moisture away from the skin. Special hollow polyester fibres improve air circulation, helping to keep you cool, dry and comfortable.

**Texpel<sup>TM</sup>** SOS, Splash, Oil and Stain is a premium fabric finish which repels oil and liquids, causing them to bead up and roll off the fabric surface. The finish also helps release stains in the washing process, keeping garments looking cleaner for longer.

Innovation, quality components, styling and expert construction define the **PORTWEST** footwear collections.

The **PORTWEST** footwear range offers a wide choice of industry leading styles, engineered for performance and ergonomically designed for maximum comfort, protection and reliability. Strong and flexible construction with innovative and stylish design, ensures longer lasting, superb fitting footwear that will withstand the test of time.

A premium range of safety footwear manufactured using only the best materials and components. Constructed to provide unbeatable comfort, support and flexibility, this range is designed to protect your feet in the toughest environments.

A superb range of safety footwear manufactured using the finest materials and components. Portwest Steelite® footwear contains protective steel toecaps and/or steel midsoles.

An exceptional range of safety footwear which is lightweight, flexible and metal free. Portwest Compositelite® footwear contains non metallic protective toecaps and/or non metallic protective midsoles.

# INNOVATIVE SAFETY FOOTWEAR FOR DEMANDING ENVIRONMENTS

#### **STANDARDS**

#### AS 2210.3:2019

This Australian and New Zealand standard specifies basic and additional (optional) requirements for safety footwear used for general purposes. It includes, for example, mechanical risks, slip resistance, thermal risks, ergonomic behaviour. The classification system used to identify the protection provided by the footwear is listed:

Category	Additional requirements
SB	The presence of a safety toecap providing protection against impact injury to the toes caused by falling objects. Level of protection provided is 200 joules. Prevention of compression injury to the toes if trapped under a heavy object. Level of this protection is 15kN.
SBP	As SB standard plus penetration resistance.
S1	As SB standard plus closed seat region, antistatic properties, resistance to fuel oil and energy absorption of seat region.
SIP	As S1 standard plus penetration resistance.
<b>S</b> 2	As S1 standard plus water penetration and water absorption resistance.
<b>S</b> 3	As S2 standard plus cleated outsole and penetration resistance.
<b>S</b> 4	200 joule toecap protection. All rubber or all polymeric footwear with antistatic properties. Resistance to fuel oil, energy absorption of seat region and closed seat region.
S5	As S4 standard plus cleated outsole and penetration resistance.

#### EN ISO 20345:2011

This international standard specifies basic and additional (optional) requirements for safety footwear used for general purposes. It includes. for example, mechanical risks, slip resistance, thermal risks, ergonomic behaviour. The toecap protects the wearer's toes against risk of injury from falling objects and crushing when worn in work environments where potential hazards may occur. The midsole protects against the foot being pierced by underfoot objects.

#### Table of additional requirements

for special applications with appropriate symbols for marking.

Requirement		Symbols
	Penetration resistance	P
	Electrical properties: Antistatic footwear	Α
	Resistance to inimical environments: Cold insulation of sole complex	CI
Whole Footwear	Energy absorption of seat region	E
	Water Resistant	WR
	Metatarsal protection	M
Upper	Water penetration and absorption	WRU
$\sim$	Resistance to hot contact	HRO
Outsole	Resistance to fuel oil	FO

All footwear is tested to AS/NZS 2210.3:2009 (Thread strengths)

#### **FOOTWEAR SIZE CHART**

UK Ladies Size	1	2	3	4	5	6	6.5	7	8	9									
US Ladies Size			5	6	7	8	8.5	9	10	11									
Euro Size	34	35	36	37	38	39	40	41	42	43	44	45	46	47	48	49	50	51	52

#### THE AUSTRALIAN/NEW ZEALAND **GLOVE STANDARDS AS/NZS 2161** HAVE BEEN REPRODUCED FROM THE EQUIVALENT EUROPEAN STANDARDS.

**Protective Gloves: General Requirements** EN 420: 2003 + A1 2009 (AS/NZS 2161.2)

This standard defines the general requirements for glove design and construction, innocuousness, cleaning instructions, electrostatic properties, sizing, dexterity, water vapour transmission and absorption along with marking and information.

#### **EN407**

#### Protective Gloves Against Thermal Risks (Heat and/or Fire) -

EN 407: 2004 (AS/NZS 2161.4)

This standard specifies thermal performance for protective gloves against heat and/or fire. The heat and flame

#### **B: RESISTANCE TO CONTACT HEAT:**

after the ignition source has been eliminated.

Performance Level	Contact Temperature (°C)	Threshold Time (Second)		
1	100°C	≥15s		
2	250°C	≥15s		
3	350°C	≥15s		
4	500°C	≥15s		

Time during which the material remains lit and continues to be consumed

#### Protective Gloves Against Mechanical Risks - EN388:2003. EN388:2016

**EN388** 2016

1341EP

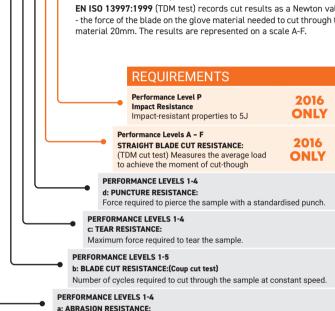

Over recent years, changes in the manufacturing process of protective gloves has meant that the well established method of hand protection testing (EN388:2003), and in particular the test to assess protection against cuts has now been deemed no longer fit for purpose. Whilst the old system in EN388:2003 and its 1-5 numbering system was easy to understand, the development of newer cut resistant materials combined with a drive from industry to provide the highest level of cut protection possible meant that the method for testing hand protection needed to be revised.

EN388:2016 seeks to update the standard and by doing this, 2 tests have been revised (abrasion and cut) and 2 new tests have been included (straight blade cut resistance and impact resistance).

EN388:2003 standard specifies physical and mechanical aggression caused by abrasion, blade cut, tearing and puncture.

EN388:2016 updates the existing standard with a new test method for abrasion, blade cut & impact resistance.

EN ISO 13997:1999 (TDM test) records cut results as a Newton value - the force of the blade on the glove material needed to cut through the

EN388:2003	Level 1	Level 2	Level 3	Level 4	Level 5
Abrasion resistance (number of cycles)	100	500	2,000	8,000	-
Blade cut resistance (index)	1.2	2.5	5	10	20
Tear resistance (N)	10	25	50	75	-
Puncture resistance (N)	20	60	100	150	-

Number of cycles required to hole the sample at constant speed.

EN ISO 13997:1999 TDM	Level A	Level B	Level C	Level D	Level E	Level F
Cut resistant test levels (N)	2	5	10	15	22	30

#### NEW CUT LEVEL ICON

To simplify the change from the 2003 cut standard to the 2016 version Portwest has included a simple indicator showing the old standard and the new.

It is worth noting that there is no direct comparison between the two standards. For example "Cut Level 5's" have no equivalent level in the 2016 standard.

#### **EN374**

#### Protective Gloves: Against Chemicals And Micro-Organisms EN ISO 374-1:2016

## Terminology and performance requirements for chemical risks.

New to the standard - There are now 3 standard classes related to the performance level and number of chemicals they protect against. There are 6 additional chemicals to test against. There is a requirement to test for degradation EN 374-4:2013. EN374-3:2003 is withdrawn and is replaced by EN 16523-1:2015. Gloves longer than 400mm will have to be additionally tested in the cuff area. The requirement for testing to EN388 has been removed. The "low chemical" or "Waterproof" beaker symbol has been withdrawn.

ISO 374-1:2016/Type C

ISO 374-1:2016/Type B

X - Low Chemical

Code	Chemical	Class
Α	Methanol	Primary alcohol
В	Acetone	Ketone
С	Acetonitrile	Nitrile compound
D	Dichloromethane	Chlorinated paraffin
Е	Carbon disulphide	Sulphur containing organic compound
F	Toluene	Aromatic hydrocarbon
G	Diethylamine	Amine
Н	Tetrahydrofurane	Hetero-cyclic and ether compound
I	Ethyl acetate	Ester
J	n-Heptane	Saturated hydrocarbon
K	Sodium hydroxide 40%	Inorganic base
L	Sulphuric acid 96%	Inorganic Mineral Acid
М	65% Nitric Acid	Inorganic mineral acid, oxidising
N	99% Acetic Acid	Organic acid
0	Ammonia hydroxide 25%	Organic acid
Р	30% Hydrogen peroxide	Peroxide
S	40% Hydofluoric acid	Inorganic inerla acid, contact poison
Т	37% Formaldehyde	Aldehyde

#### EN 374-2:2014 Determination of resistance to penetration

There are no major changes from EN374-2:2003

ISO 374-5:2016

Marking of gloves protecting against, bacteria and fungi

ISO 374-5:2016

Additional marking for Virus

## EN 374-4:2013 Determination of resistance to degradation by chemicals (DR)

New to the standard – tests puncture resistance before and after exposure to a challenge chemical. The average of the performance will be recorded in the usersheet as a percentage (%).

## EN ISO 374-5:2016 Terminology and performance requirements for micro-organisms risks

Microorganisms are classed as bacteria, viruses or fungi. Gloves protecting against viruses must also pass ISO16604:2004.

# BS EN 16523-1:2015 Determination of material resistance to permeation by chemicals. Permeation by liquid chemical under conditions of continuous contact.

This test is similar to EN374-3 therefore gloves certified to EN374-3 do not need to be retested.

#### EN 16350:2014

#### Protective Gloves: Electrostatic Properties

This European standard specifies a test method for the electrostatic properties of gloves. The test improves on EN1149 as it requires a lower vertical resistance of less than 108 ohms. Gloves tested to EN16350:2014 can be used in areas where there may be an increased risk of explosion, such as in a refinery.

#### EN12477

## Protective Gloves For Welders

This European Standard specifies requirements and test methods for protective gloves for use in manual metal welding, cutting and allied processes. According to their performance, protective gloves for welders are classified into two types.

Type A: Lower dexterity (with higher other performance).

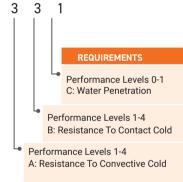

Type B: Higher dexterity (with lower other performance).

#### **EN511**

## Protective Gloves Against Cold EN 511:2006 (AS/NZS 2161.5)

The European Standard specifies the requirements and test methods for gloves which protect against convective and contact cold down to -50 degrees Celsius. This cold can be linked to the climate conditions or an industrial activity.

#### EN ISO 10819

## Protective Gloves: Mechanical Vibration And Shock EN 10819:1996

This European Standard specifies a method for the laboratory measurement, the data analysis and reporting of the vibration transmissibility of gloves in terms of vibration transmission from a handle to the palm of the hand in the frequency range from 31.5 Hz to 1250 Hz. The standard is intended to define a screening test for the vibration transmission through gloves.

## THE COMPLETE **PORTWEST HAND PROTECTION RANGE**

Water repellent nano coating for light splash applications. Using innovative technology these gloves repels water and heavy oils. Liquid placed on these gloves rolls off, protecting the underlying

WATER REPELLENT

The latest development in glove technology, this collection of specially designed gloves provide protection to hands from impact hazards. Portwest Anti-Impact gloves utilise the latest research in materials technology in order to absorb a maximum amount of force from impacts.

Working environments using hazardous chemicals and substances can be extremely harmful to workers and the correct protection is a must. Portwest supplies a range of gloves which are fully tested and certified to protect from a range of chemicals.

When cold thermal hazards are present, the hands' motor skills can be greatly reduced, this leads to increased risks of accidents and injury. Specially designed thermal protective gloves are available to combat these hazardous environments.

The Portwest Pro range is a combination of highly specialised gloves which have been designed for very specific tasks. The use of these gloves with the right task will preform better than any other glove which has been designed for more general purposes.

COLD PROTECTION

Hand injury is one of the most frequent types of accident reported in the working environment, with cuts and lacerations the biggest concern in this area. Portwest's range of cut resistant gloves gives varying degrees of protection depending on what level is reauired.

SPECIALIST HAND PROTECTION

One of the best selling ranges of gloves globally, the Drivers and Riggers collection houses a large selection of work gloves made from premium genuine and synthetic leather. This affords the user the best in breathability, durability, comfort and

PREMIUM CUT PROTECTION

The General Handling and Grip Glove category is still one of the most popular collections within Portwests' Hand Protection Range. A carefully selected range of coatings, including Latex, Nitrile, Polyurethane and PVC, provides a broad range of styles suited to a diverse range of tasks.

MULTI PURPOSE WORK GLOVES

Higher levels of protection are needed when a worker is dealing with extremely hot temperatures and heated materials. The Portwest Weld range has an expanding selection of hand protection solutions suitable for all welding and thermal risk.

MAXIMUM GRIP GLOVES

The Heat Protection range provides hand protection against temperatures ranging from 100 degrees to 500 degrees for contact heat, while maintaining exceptional hand dexterity. Trusted to safeguard hands against heat hazards in all work environments.

WELDING PROTECTION GLOVES

Designed to dissipate static electricity, the Portwest ESD glove range has been tested to EN16350, a glove specific standard, to ensure protection of electronic devices from the risk of damage by electrostatic phenomena and static charge. Ideal for use in electrical component manufacturing.

**HEAT SAFE GLOVES** 

Designed to enhance grip for precision work, this collection protects from a broad range of hazards. The gloves are constructed from highly engineered textiles and offer an extensive selection of colours, lining, and size options. This collection is suitable for mechanic applications, general construction, material handling, carpentry and utility work.

on contact ensuring human health and product composition is protected. The range features disposable and non-disposable working gloves, promoting dexterity, durability and cut protection.

The Food Safe glove range does not alter food

DURABLE GRIP GLOVES

The ultimate barrier to water, liquids and non-aggressive substances. The Aqua range includes both highly water resistant and water proof gloves.

Designed to offer outstanding protection in the most challenging environments, where there is an increased risk of electric arc. These specialist gloves greatly reduce the damaging effects of electric arc by providing the wearer with exceptional protection against ARC flash burns and cuts.

PROTECTIVE CLOTHING AGAINST INFECTIVE

NUCLEAR

EN 1149 ELECTROSTATI

CHEMICAL PROTECTION

#### EN 14126:2003 + AC:2004

This specifies the requirements and test methods for limited use protective clothing providing protection against infective agents.

Protective clothing against radioactive contamination. Requirements and test methods for non-ventilated protective clothing against particulate radioactive

against hazardous dust and dry particles.

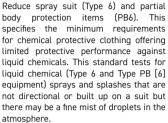

#### EN1149-5:2008

contamination.

#### EN 13034: 2005 + A1:2009 (Type 6)

Electrostatic requirements - surface resistivity (test methods and requirements). This tests for the removal of electrostatic to avoid sparks that could cause fire/hazard to the wearer.

#### **Chemical Protection**

Indicates compliance with current European standards for chemical PROTECTION protective clothing.

#### EN 14605: 2005 + A1:2009

Protective Clothing Against Liquid Chemicals. This standard specifies performance requirements for clothing with liquid-tight (Type 3) or spray-tight (Type 4) connections, including items providing protection to parts of the body only. (Types PB [3] and PB [4])

#### Liquid Tight Suits. (Type 3)

This test involves exposing a whole suit to a series of short jets of a water based liquid, aimed at various critical parts of the suit. This suit protects against strong jets of liquid chemical.

#### Spray Tight Suits. (Type 4)

BizTex SMS

Test involves exposing a whole suit to an intense spray of a water based liquid. This suit protects against saturation of liquid chemicals.

**BREATHABLE PROTECTION** 

> Portwest BizTex SMS products are manufactured with an integrated three layer polypropylene construction:

#### **BIZTEX SMS COVERALL TYPE 5/6**

- · CE-CAT III
- · Two-way zip for quick and easy access
- · Ergonomically shaped hood for a perfect fit
- · Provides an effective barrier against particulates, aerosols and light sprays
- · Retail bag which aids presentation for retail sales
- · Highly breathable SMS fabric

BizTex SMS, 55g
White S-3XL

#### **VISTEX SMS COVERALL TYPE 5/6**

EN ISO 13982 (TYPE 5) EN 13034 (TYPE 6) EN 1073-2 EN 1149 -5

- · CE-CAT III
- · Premium reflective tape for increased visibility
- · Two-way zip for quick and easy access
- · Ergonomically shaped hood for a perfect fit
- Antistatic
  - Designed with a comfortable fit

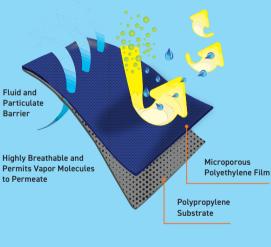

BizTex SMS, 55g
Orange M-3XL

**ANTI-STATIC BREATHABLE AGAINST LIQUID HAZARDS** 

> Portwest's BizTex Micro fabric is a polypropylene substrate to which a laminated microporous polyethylene layer is applied (PP/PE). The outer layer of the fabric prevents the passage of liquid molecules inwards yet permits the vapour molecules that build up inside permeate.

#### **BIZTEX MICROPOROUS COVERALL TYPE 4/5/6**

EN 14605 TYPE 4B EN ISO 13982 TYPE 5B **EN 13034 TYPE 6B** EN 1073-2 EN 14126

- · CE-CAT III
- · Taped seams to provide additional protection
- · Two-way zip for quick and easy access
- · Ergonomically shaped hood for a perfect fit
- · Antistatic
- · Low linting construction for minimal contamination

BizTex Micro, 60g White M-3XL

#### **BIZTEX MICROPOROUS COVERALL TYPE 5/6**

EN ISO 13982 TYPE 5B EN 13034 TYPE 6B EN 1073-2 EN 1149 -5 EN 14126

- · CE-CAT III
- · Two-way zip for quick and easy access
- · Ergonomically shaped hood for a perfect fit
- · Antistatic
- · Retail bag which aids presentation for retail sales
- · Low linting construction for minimal contamination

BizTex Micro, 60g White S-3XL

**PORTWEST** PPE range complies to all of the latest updated standards to offer the highest level of protection. Designed with comfort in mind, this range of lightweight PPE ensures a pleasant wear even after long hours of use. Your safety is our mission.

#### **DISPOSABLE MASKS**

Our Biztex® brand ensures exceptional quality and performance across our full range of disposable masks. The extensive Biztex® range offers a high level of protection and quality safeguarding the wearer against many workplace risks including liquid chemicals, static electricity, dry particles and radioactive contamination. The complete Biztex® range includes disposable masks and limited-life garments.

#### **EYE PROTECTION**

**PORTWEST**'s eye protection range includes spectacles, safety goggles and visors, designed to protect the eyes and face of workers from injury during work activities.

### **HEAD PROTECTION**

**PORTWEST's** head protection range aims to benefit our customers by combining the most up to date styles and standards in head protection, irrespective of job or location. Innovative, comfortable and lightweight helmets available for multiple uses.

#### **HEARING PROTECTION**

**PORTWEST**'s hearing protection range includes PPE with different level sound attenuation, to be adapted to various working environments giving the correct protection from dangerous noise, without isolating the workers. This new range of earmuffs offer a variety of models and colours allowing a personalised choice

#### **GENERAL PPE**

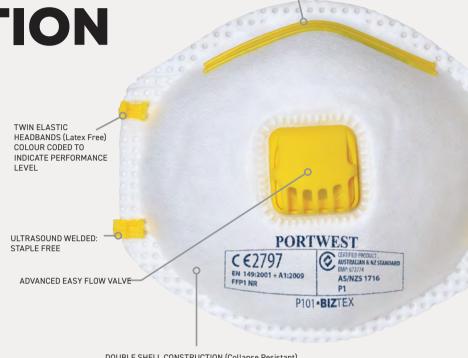

**PORTWEST** General PPE range includes knee pads, lights, luggage and accessories. This complete range of General PPE offers a collection of products that are suitable for a variety of applications.

## **PORTWEST**

RESPIRATORY **PROTECTION** 

Our Biztex® brand ensures exceptional quality and performance across our full range of disposable masks. The extensive Biztex® range offers a high level of protection and quality safeguarding the wearer against many workplace risks including liquid chemicals. static electricity, dry particles and radioactive contamination. The complete Biztex® range includes disposable masks and limited-life garments.

ADJUSTABLE NOSE BRIDGE

### **ALL DISPOSABLE MASKS ARE CATEGORY 3 HAZARD PROTECTION**

**Respiratory Protective Devices** 

The purpose of standard AS/NZS 1716 is to provide minimum performance and testing criteria to be observed in the manufacture of respiratory protective devices, setting out the parameters and requirements for the different types of respirators.

#### **AS/NZS** 1715:2003

Selection, Use and Maintenance of Respiratory Protective Equipment

The purpose of standard AS/ NZS 1715 is to provide users with information on selection, use and maintenance of suitable respiratory protective equipment for their needs, protecting the body against various substances which could enter the body through the respiratory system.

## +A1:2009

**Respiratory Protective Devices** - Filtering half masks to protect against particles

European Standard for filtering halfmasks. It contains laboratory tests to check the conformity with resistance to impacts, to cleansers and disinfectants, to temperature, to flame and with respiratory resistance. With A1:2009 amendment, filtering dust masks are now classified as either single use /single shift (NR) or reusable/more than 1 shift (R).

#### **P1 OR P2 PROTECTION?**

#### P1: According to AS/NZS 1716:2003

Choose a P1 mask for filtering mechanically generated particles e.g. particles formed by crushing, grinding, drilling, sanding and cutting.

SWEAT ABSORBING NOSE FOAM

(Silicone/Latex Free)

#### P2: According to AS/NZS 1716:2003

Choose P2 for filtering mechanically and thermally generated particles e.g. welding fumes. P2 respirators are also recommended for use against some bioaerosol.

#### **RESPIRATORY PROTECTION - DISPOSABLE MASKS**

#### **LATEX FREE**

## FFP2 DUST MIST RESPIRATOR

AS/NZS 1716 P2 NIOSH N95 EN 149 FFP2 NR

- · Ultrasound welded elastic straps
- · Large inner space to help the user to breathe more easily
- · Ideal for all day use
- · Retail box which aids presentation for retail sales

........... PP White One Size

#### P201 **FFP2 VALVED DUST MIST**

**RESPIRATOR** AS/NZS 1716 P2 NIOSH N95 EN 149 FFP2 NR

- · Ultrasound welded elastic straps
- High performance exhalation valve to reduce heat and provide comfort when used in hot and humid conditions
- Large inner space to help the user to breathe more easily
- Ideal for all day use
- Retail box which aids presentation for retail sales

PP White One Size

#### FFP2 CARBON VALVED DUST **MIST FUME RESPIRATOR**

AS/NZS 1716 P2 EN 149 FFP2 NR

- · Ultrasound welded elastic straps
- · Activated carbon layer for improved absorption of nuisance odours, organic vapours and welding fumes
- · High performance exhalation valve to reduce heat and provide comfort when used in hot and humid conditions
- · Large inner space to help the user to breathe more easily
- · Ideal for all day use
- · Retail box which aids presentation for retail sales

PP White One Size

#### P100

## FFP1 DUST MIST RESPIRATOR

EN 149 FFP1 NR

- · Ultrasound welded elastic straps
- · Large inner space to help the user to breathe more easily
- · Ideal for all day use
- · Retail box which aids presentation for retail

₩ PP White One Size

#### P101

#### FFP1 VALVED DUST MIST RESPIRATOR

AS/NZS 1716 P1 EN 149 FFP1 NR

- Ultrasound welded elastic straps
- High performance exhalation valve to reduce heat and provide comfort when used in hot and humid conditions
- Large inner space to help the user to breathe more easily
- Ideal for all day use
- Retail box which aids presentation for retail sales

#### **AS/NZS** 1337.1: 2010

Australian and New Zealand standard for Eye Protectors for Industrial Applications.

This standard describes features of safety eyewear in terms of general finishing, optical properties or the lenses and impact resistance.

Untinted or lam- inated / double glazed	These eye protectors are intended for indoor use where no optical radiation hazards exist.
Outdoor untinted	These eye protectors are intended for indoor and outdoor use where no optical radiation hazards exist other than solar radiation. They are intended to provide adequate protection against ultravoilet radiation from the sun, but are not intended to provide protection against sunglare.
Outdoor tinted	These eye protectors are intended for outdoor use where no optical radiation hazards exist other than solar radiation. They are intended to provide adequate protection against sunglare and ultraviolet radiation from the sun.

## LENS SHADOW CLASSIFICATION based on the transmittance (% of visible light passing through the lens):

Eyewear Category:		% Of Visible Light Passing Through The Lens						
	Min	Max						
Category 0	80 %	100 %						
Category 1	43 %	80 %						
Category 2	18 %	43 %						
Category 3	8 %	18 %						
Outdoor Untinted	80 %	100 %						

Lens Marking	Features	Protector type
S	Low impact resistance (13 m/sec - 6mm steel ball)	Safety glasses (basic requirement - optional)
l or F	Medium impact resistance (45 m/sec -6mm steel ball)	Safety Glasses, Goggles
V or B	High Impact resistance (120 m/sec - 6mm steel ball)	Face-shields, hoods, welding hand-shields or welding helmets
А	Extra High Impact resistance (190 m/sec - 6mm steel ball)	Face-shields

#### EN 166: 2001

European Standard, applying to all types of individual protection of the eye which protects from hazards likely to damage the eye, except for nuclear radiation, x-rays, laser emissions and infrared emitted by low-temperature sources. Does not apply to eye protection for which separate standards exist (E.g. anti-laser eye protection, sunglasses for general use).

#### EN 170: 2002

UV Rays Protection European Standard for Ultraviolet Filters

Specifications of level numbers and of requirements relating to the transmittance of the filters for protection against ultraviolet radiation.

#### EN 172: 1995

Specification For Sunglare Filters Used In Personal Eye-Protection For Industrial Use European Standard for Sunglare filters for industrial use

Specification of level numbers and requirements relating to the transmittance of filters for protection against solar radiation, industrial use.

#### **AS/NZS** 1801: 1997

## Australian and New Zealand standard for Hard Hats.

This standard describes the requirements safety helmets must fulfil, describing details for helmets construction, materials of the shell and head harness and the mechanical strength.

Main tests includes: shock absorption, stiffness test, resistance

to penetration, electrical resistance, thermal performance test. According to the AS/NZS 1801 standard, helmets are classified in:

**Type 1:** General Industrial Safety Helmets

**Type 2:** Helmets intended for high temperature working places

**Type 3:** Helmets intended for bushfire fighting.

#### EN 397: 2012

#### European Standard for industrial safety helmets

This standard specifies the physical and performance requirements (for example, shock absorption and resistance to penetration) for safety helmets, intended to provide protection against falling objects.

#### EN 812: 2012

Industrial Bump Caps European standard for bump caps for industry, describing mandatory impact and penetration tests.

- · Lightweight EVA foam cushioning
- · Reduces knee and back strain
- · Integral carry handle
- · Retail bag which aids presentation for retail sales

EVA Foam Black One Size 40cm x 18.5cm x 2cm

## LIGHTS

## NEXT GENERATION LIGHTING

The **PORTWEST** lights range is designed to provide premium quality, high performance lighting to increase safety and illuminate dark spaces across multiple industries.

Efficient run times and optimum brightness ensure a long lasting, reliable, multifunctional solution for all your needs. These compact and ergonomic designs offer the user total dependability and versatility in hard working environments.

**Brightness** 

Brightness is measured in lumens (LM). This icon denotes how many Lumens each light can produce allowing you to pick the right light for the right job.

Run time

Run time means the amount of time you can expect to get from your light from fully powered to empty. This allows you to choose the right ratio of brightness to run time to suit you best.

USB rechargeable lights will fully charge from any USB Port.

## **KEY SYMBOLS**

This symbol indicates that a mobile phone pocket is included in the garment.

This symbol indicates that garments have print/embroidery access.

#### Interactive garment

This symbol indicates a second garment can be zipped into to create a combination

#### Two-way zipper

This symbol indicates that the zipper can be opened from the top or bottom of the garment.

#### Reversible garment

This symbol indicates that garments are reversible.

#### Internal tablet pocket

This symbol indicates that an internal tablet pocket is included in the garments which carry this symbol.

#### Breathable garment

This symbol indicates that the garment is made of a high performance breathable fabric.

#### Free spec cord

Free spec cord with styles showing this symbol.

#### Knitting gauge

This symbol denotes the knitting gauge of the

#### Anti-scratch

Surface coating intended to mitigate scratch effects on the lens.

#### Anti-fog

Surface treatment which helps reduce fogging effects on the lens.

#### Lateral deformation

Optional test for safety helmets, it indicates the resistance to lateral compressions.

#### Molten metal

Optional test for safety helmets, it indicates the resistance to molten metals and hot solids projection.

#### Radio loops

Radio loops for easy clipping of a radio.

#### Half elasticated waist

This symbol indicates a half elastic waistband on pants which allows for all-day comfort for the wearer.

range of ergonomically designed knee pads.

Knee pad pockets

## SUSTAINABILITY

WORKING TOWARDS THE UNITED NATIONS SUSTAINABLE DEVELOPMENT GOALS

## **Partnerships for Goals**

Our ethos is to build strong global partnerships and cooperation with industry test houses and associations.

PORTWEST products are rigorously tested and certified by accredited test houses and notified bodies including:

PORTWEST are members of many global industry leading associations. We are proud members of:

## **Responsible Consumption &** Production

We are continually striving to implement low-carbon and green initiatives, by increasing resource efficiency and promoting a sustainable lifestyle.

Many garments in the Portwest range are made from recycled polyester. PORTWEST use 35 Million 1/2 Litre recycled bottles to make Portwest garments every year.

TYPICALLY IT TAKES 20 PET BOTTLES TO MAKE ONE JACKET

80% OF ALL PACKAGING IS RECYCLABLE
